How does the Smart Cities Information System work?

Demonstration & Urban planning projects: Solutions & Data

Database & Website:

Technologies | Demo sites | KPIs | Solutions | Recommendations

EU Smart Cities
Information
System

Policy makers

**Cities & Project
coordinators**

Experts

Projects

The projects in scope of SCIS cover and combine a wide range of measures and solutions in the field of energy efficiency:

- Energy efficiency in buildings
- Renewable energy
- Mobility & Transport
- ICT-based solutions for energy efficiency

Data collection

SCIS collects valuable data and expertise from smart cities demonstration projects and sites and channels them into a database to promote replication:

- KPIs
- Monitoring of performance
- Demo site visits
- Online self-reporting tool

Website

SCIS presents a thematic overview of projects in fields such as energy-efficient buildings, districts and cities, sustainable energy, sustainable urban planning, etc.

- KPIs
- Demo site
- Technologies
- Projects
- Barriers & Solutions

Best practices & solutions

SCIS analyses project results **to enable project developers and cities to learn and replicate:**

- Best practices
- Lessons learnt
- Challenges & Solutions
- Policy recommendations

What are the benefits for project developers and cities?

Share, learn & replicate

- Submit project results and **compare** with others
- Take advantage of replicable technologies and innovations
- Learn from best practice in **sustainable urban planning** and discover ways to overcome the challenges
- Research potential barriers to technology implementation, **solutions** and related policy implications
- Meet and **collaborate** with other project developers, cities, institutions, industry and experts
- **Promote** your project and enhance its visibility
