

Guidebook ‘Results of the GuiDanCe training process’

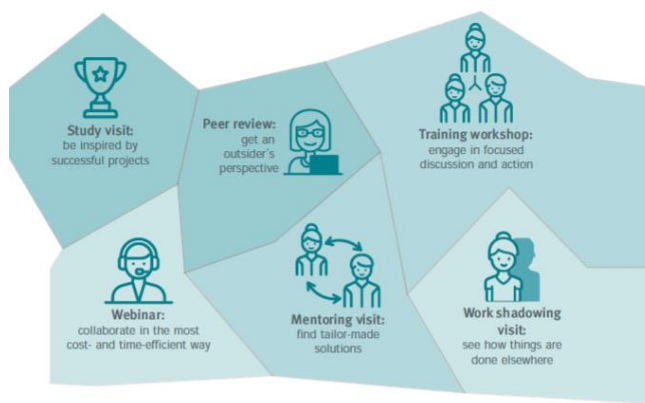

During GuiDanCe project, both onsite and online training activities were organised to support signatory cities in overcoming implementation barriers and challenges encountered at the local level.

This guidebook reports - in a user-friendly way - on the achievements and lessons learnt from GuiDanCe training activities.

Peer-to-peer learning is an excellent instrument for improving the implementation of cities’ policies and strategies. It is based on the idea that people who work on similar issues and have similar roles and working background in their cities can share experiences and learn from each other. ‘Peers’ share a common understanding of and interest in implementing smart and digital projects and policies. In many ways, they ways similar challenges, need to find solutions to similar problems and look for corresponding solutions, projects and alliances.

In this guidebook a collection of six training methods that cities can use to exchange knowledge and best practices are presented. Each one has its own strengths and advantages and the GDC guidebook collects and explains the format, objectives and different steps to follow for organising a successful peer-to-peer training event. Examples from GuiDanCe training activities are there to illustrate all approaches.
